DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-6, drawn to the particular connection of elements for driving an active matrix organic light emitting diode, classified in class 345, subclass 82.
 - II. Claim 7, drawn to a current driving method where a frame is divided into two periods and the potential of the common line is raised and lowered according to the state of the write period, classified in class 345, subclass 206.
2. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination I has separate utility such as the particular structure for current driving where the connections of elements may exist as other forms to produce the effects of subcombination II. See MPEP § 806.05(d).
3. Because these inventions are independent or distinct for the reasons given above and the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.
